

THE FEATURES OF INTEREST DATASET CONTAINS AUTHORITATIVE GOVERNMENT FEATURE DATA AS WELL AS COMPREHENSIVE FEATURES FROM SELECTED ORGANISATIONS. THE DATASET INCLUDES MULTIPLE GEOMETRY TYPES, REPRESENTING A TARGETED LIST OF OVER FIVE HUNDRED FEATURE TYPES.

USES

With the widespread adoption of personal navigation devices and web mapping applications, Feature Data is increasingly relied on. Features of Interest is a dataset that is applicable to multiple commercial and government situations as it contains many places not described by an official address, for example, urban parks, water storage facilities, national park camping grounds or boat ramps.

The dataset incorporates comprehensive urban centre locality data, including indigenous locations.

Features of Interest is an independent dataset that can be integrated with associated datasets such as G-NAF, providing enhanced functionality. The dataset contains persistent identifiers and includes the following geometry data types: point (such as address), line (roads) and polygon (land parcel or boundary area).

The inclusion of authoritative feature data supports:

- Improved online maps
- Enhanced personal navigation experiences
- National catalogues of significant buildings, landmarks, public spaces, and community facilities
- Enhanced routing products
- Validation of private databases

INFORMATION SOURCES

Features of Interest is updated quarterly by PSMA Australia through contributions from authoritative government sources and selected contributors.

The dataset is accessible in multiple formats including ESRI Shapefile, MapInfo Tab and Oracle 10g Dump.

ACCESS

PSMA Distribution manages the distribution of PSMA Data, Australia's authoritative data. Widespread access is supported through a network of Value Added Resellers (VARs) who combine their expertise and market knowledge with PSMA Data to develop and sell a diverse range of mapping products and services in addition to business and location intelligence tools.

FOR MORE INFORMATION

PSMA Data is built and maintained by PSMA Australia.
